**CAMPUS EMERGENCY
ALERT SYSTEM**

Affected Area Alert

Alert and Advise Those in Harm's Way

In an emergency situation it is essential to communicate specific alerts and messages to those who stand in the direct path of danger.

You have warned the entire campus to avoid threats occurring in certain areas. Now you must communicate directly with those in "affected areas" who may be in lock-down mode, under continued danger, or trapped.

The RAVENAlert™ Wall Unit is an ideal emergency alert device for school classrooms, dorm rooms, libraries, offices and other campus locations where the population travels from day to day.

When emergency strikes, you only need to hit one button, one time for a pre-defined message to be sent to every necessary location.

- ★ The RAVENAlert™ Wall Unit can be mounted to a wall or sit on any flat surface. When an emergency alert message is dispatched, the red lights flash, and a loud tone will sound, while the backlit LED screen displays a text message that then gets converted to speech.
- ★ Unique messages can be given to specific groups of RAVENAlert™ Wall Units that will all be received simultaneously. This allows you to lead affected groups to safety and to avoid panic in non-affected areas.

- ★ Follow up or additional advisory messages can be sent quickly to the RAVENAlert™ Wall Units without risking network congestion as well as an "all clear" message can be delivered when the event has ended.

- ★ The cost effective RAVENAlert™ Wall Unit is based on technology that will not be impacted by power outages, busy cell phone networks, outdated contact databases, incorrect media coverage, or missed email messages. There is no ability to "opt out" or turn it off.

RAVENAlert™ Wall Unit's fast, intelligent alert is your best practice to save lives in the event of a gunman or terrorists, weather disasters, bomb threats, toxic gas and liquid spills, fires, geologic changes, and all other threatening, unpredictable events to your campus.
