

RAVENAlert™ Keychain*

IntelliGuard SYSTEMS™
SAFEGUARDING YOUR COMMUNITY

**CAMPUS EMERGENCY
NOTIFICATION SOLUTION**

Individual Alert

Keep Campus Safety in Your Hands

RAVENAlert™ Keychain* is a triumph of micro technology . Now every student, faculty and staff member can carry an intelligent alerting device designed to fit on a keychain. A core device in the IntelliGuard Systems™ Campus Solution, the RAVENAlert™ Keychain* will notify everyone on campus with 1 message simultaneously of an emergency situation within 20 seconds. The keychain notification includes an audible alarm, and a text message designed to grab attention and instruct each individual on the next steps.

Should the students stay where they are? Is it time to release an "all clear" message?

You can have five or five hundred thousand keychains; none of which require an individual phone number or email address. The RAVENAlert™ Keychain* can send repeat messages and follow-up messages just as easily as the first message.

The RAVENAlert™ Keychain* is always on and always ready, both inside and outside.

Using trusted wireless broadcast technology that works in tandem with other RAVENAlert™ products and your secondary notification processes, the RAVENAlert™ Keychain* allows you to give every student, faculty and staff member armor against danger. Here's how:

- ★ The RAVENAlert™ Wall Unit* includes a dedicated channel for the network of transmitters that provides radio frequency signals on campus, amplifiers to enhance those signals, software to encode the broadcast messages, dispatch software, and as many keychains as required.
- ★ The RAVENAlert™ Keychain* is functional and small enough to attach to backpacks, belts, purses, etc.
- ★ Paging technology uses existing FCC licensed networks and is the same cost effective technology trusted by thousands of doctors and emergency responders nationwide.
- ★ The cost effective RAVENAlert™ Keychain* is based on technology that will not be impacted by power outages, busy cell phone networks, outdated contact databases, incorrect media coverage, or missed email messages. There is no ability to "opt out" or turn it off.

RAVENAlert's™ fast, intelligent alert is the best security practice to save lives in the event of a gunman or terrorists, weather disasters, bomb threats, toxic gas and liquid spills, fires, geologic changes, and all other threatening, unpredictable events to your campus.
